	<p style="text-align: center;">Lab Experiment: Prompt Engineering – Improving Prompts and Context Management (0.5 marks)</p> <p>Objective</p> <p>To explore how prompt design and context influence AI-generated outputs and to learn techniques to improve AI responses.</p> <hr/> <p>Tools Required</p> <ul style="list-style-type: none"> <li>● GitHub Copilot / Google Gemini / ChatGPT</li> <li>● VS Code / Google Colab</li> <li>● Internet access</li> </ul> <p>Procedure</p> <ol style="list-style-type: none"> <li>1. Select a simple task: "Write a Python function to check if a number is prime."</li> <li>2. Use different prompting strategies to generate the solution: <ol style="list-style-type: none"> <li>a) Zero-Shot – no examples.</li> <li>b) One-Shot – one example provided.</li> <li>c) Few-Shot – multiple examples provided.</li> <li>d) Context-Managed – detailed prompt with constraints and instructions.</li> </ol> </li> <li>3. Record AI responses and refine prompts to improve code quality.</li> <li>4. Request AI to optimize the logic for efficiency.</li> <li>5. Compare results and document improvements.</li> </ol> <p>Sample Prompts ●</p> <p>Zero-Shot:</p> <p style="padding-left: 40px;">Write a Python function to check if a number is prime.</p>	

- One-Shot:

Example: Input: 5 → Output: Prime. Now, write a function to check if a number is prime.

- Few-Shot:

Example 1: Input: 7 → Output: Prime

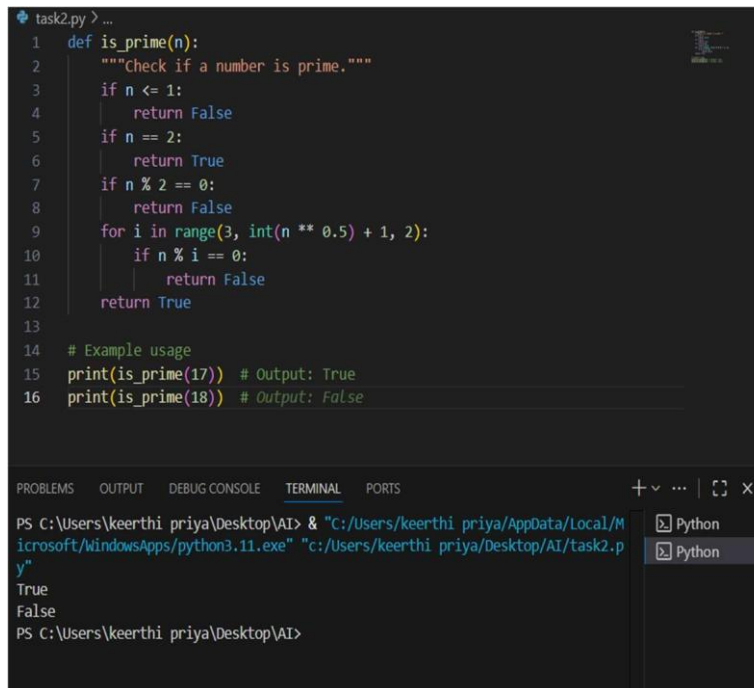

Example 2: Input: 10 → Output: Not Prime

Example 3: Input: 2 → Output: Prime

Generate the function accordingly. ●

Context-Managed (With Optimization)
